From a world model to shared beliefs

Generative model: D supplies initial state beliefs. B maps state and action to the next state. A maps hidden states to observations. C

From a world model to... (part 2)

supplies log preferences over outcomes.

From a world model to... (part 3)

Observe outcomes, infer a local categorical posterior, evaluate policies with expected free energy, then act and observe again. Solid

From a world model to... (part 4)

arrows distinguish the closed perception and action cycle.

From a world model to... (part 5)

Share posterior beliefs, not raw observations. Dashed message edges take admitted posteriors to fusion and return recipient-specific cavity

From a world model to... (part 6)

beliefs, excluding the recipient's own message.

From a world model to... (part 7)

The Eq. 7 bridge assumes shared positive support, posterior log potentials, and fixed weights. It specializes categorical combination;

From a world model to... (part 8)

it does not reconstruct the complete source protocol.
