

A The Setup

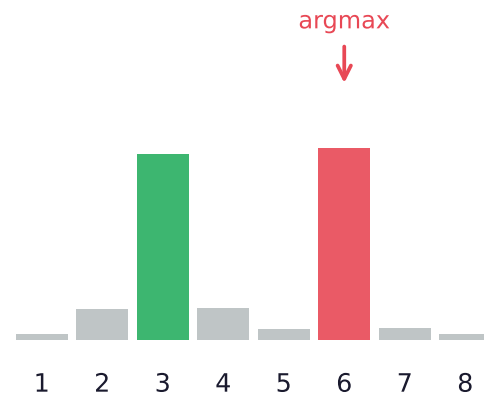

40% contamination (2/5 adversarial)

True hidden state = 3

B Naive Equal-Weight Pooling

Log-linear pool (equal weights)

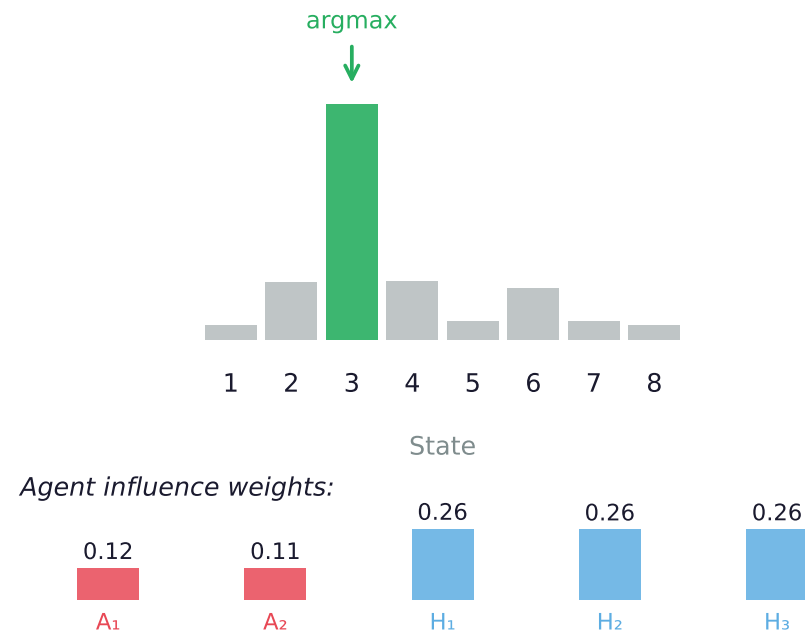

True-state mass: 39%
argmax → state 6 (true: 3)

Adversarial agents pull the consensus off-target

C Heuristic Robust Aggregation

Robust aggregate (effective weights)

True-state mass: 50%
argmax → state 3 (true: 3)
