A model file must reach real execution

GNN CONSUMPTION / EXECUTION / EVIDENCE

GNN document → admitted model
Pinned parser or source-bound sentinel cache

Check dimensions, axis order, support and A / B / C / D.

Native consumption
native_world / native_posterior

Optional upstream
Explicit root + qualified runtime

GNN-derived matrices
enter inference

Real run + parity required
No backend certified here

Retain source / input / output digests and execution receipts

Integrity ≠ scientific validity

Parser success ≠ execution. Matrix parity ≠ protocol replication.
Scientific conclusions require models, controls and scoped evidence.
